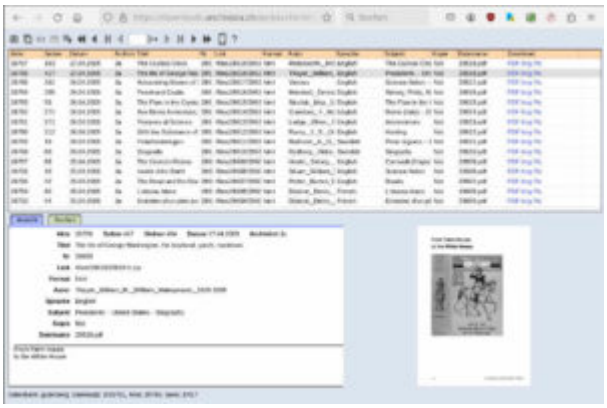
Web-based work on the Desktop



We at Archivista GmbH are convinced that web-based applications have considerable advantages – such as doing away with the need for sometimes costly and time consuming installations. Also, the application is always available and a web-application can be started much quicker than is the case with traditional applications.

The ArchivistaBox not only runs on your business desktop, ArchivistaDMS works seamlessly with any tablet or smartphone. And it does so in such a way that no additional apps need to be installed. ArchivistaDMS automatically recognizes which resolution is available on the client at any time and adapts accordingly. From smartphone screens to 8K screens, ArchivistaDMS always presents itself in such a way that all information is optimally displayed at a glance.

The best of Web and Desktop united in the ArchivistaBox

However, there are cases and applications that should normally not be based on the Internet. This is where the ArchivistaBox comes in, as it gives you the choice of how and where to put it to use.

You can use the ArchivistaBox as a stand alone application, or operate it on the Intranet and/or Internet. And with each of these options you have the choice of working with or without activated encryption. You alone decide to who and how your data is accessible. And if you want to connect multiple ArchivistaBoxes to each other then that is also no problem. Whether it is a matter of two or even more machines, an ArchivistaCluster will be ready for you in minutes.

Test ArchivistaDMS

We offer you two possibilities to test ArchivistaDMS. Firstly, you are welcome to browse through our demo archive. The demo database contains around 30,000 books from the Gutenberg project and can be accessed at **https://downloads.archivista.ch/ (Passwort is demo).**

Secondly, you can test almost the entire scope of ArchivistaDMS yourself in our cloud via **shop.archivista.ch.** If creating an account in the store is too complicated for you (automatic creation of the corresponding instance), please send us an email to **webmaster@archivista.ch** (keyword demo account) and we will be happy to create the instance for you.
